

Q.DPS.GMP.2-63: In A.DPS.1-60, GMP notes “[w]hen a Zone 4 section of line is damaged in an event and all customers served on that line remain powered up with storage, it can allow GMP to repair other areas first and return to the Zone 4 section at a different time.” If a customer declines, or substantial work is necessary to be done to the home to enable storage, or storage is not installed in 100% of homes covered by the pilot for any reason, will GMP still repair other areas first then return to the section of line treated by this Pilot, delaying the outage recovery time for customers in the Pilot area?

A.DPS.GMP.2-63:

For purposes of this initial IES pilot, if customers within a zone do not have storage, GMP would restore the line as we do today.
