

## CUSTOMER NOTICE

Effective October 1, 2026, under GMP's Multi-Year Regulation Plan, the Current Energy/Major Storm Adjustor line item will decrease 0.63% from 8.15% to 7.52%. This is due to \$19.358M in power supply and regional grid costs incurred between January 1, 2026, and June 30, 2026. That results in a 1.05% increase that will be simultaneously offset by a 1.68% reduction due to the completion of prior approved collections (FY23 and FY24 ESAM, 0.34% and 1.34%, respectively), creating the net 0.63% decrease.

The Multi-Year Regulation Plan was approved by the Public Utility Commission in Case No. 21-3707-PET and amended in Case No. 23-0141-PET. In accordance with that Plan, the new amount will be collected over a 12-month period. This line item may be adjusted down or up in the future, reflecting actual costs or savings for customers for power supply, sales, and major storm restoration.

The Public Utility Commission is reviewing the proposed net 0.63% reduction to the Current Energy/Major Storm Adjustor and customers can file comments at <https://epuc.vermont.gov/> (search for Case No. 26-1591-TF) or via email at [puc.clerk@vermont.gov](mailto:puc.clerk@vermont.gov).
